

Enterprise Content Management System Software

Overview

Software used to obtain, manage, store, protect and deliver content and documents related to existing business processes within a company or organization. It is important for companies to manage information/content effectively to increase productivity at work. Enterprise Content Management (ECM) is able to make companies provide this. ECM is usually closely integrated with the Document Management System (DMS).

Features

Sync Service

Omni-Contenta Sync Service synchronizes files between the desktop and repository using web services.

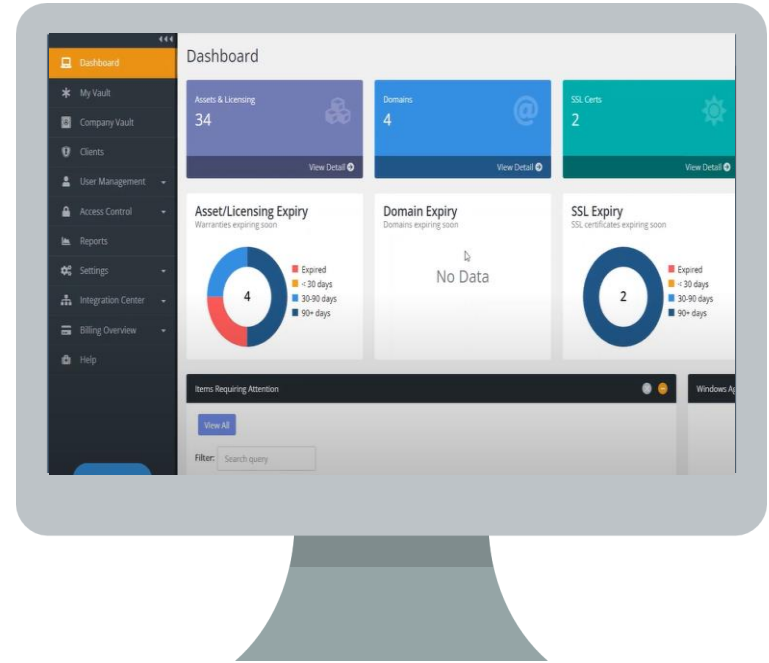

Synchronize

Automatically sync content from the content repository to your computer for native and offline working.

Desktop Sync

Desktop Sync allows you to securely manage synchronized files on your desktop.

Features

Transform

Create secure, scalable, reliable, and extensible transforms for converting files from their current format into other formats using the all-in-one Transform Core Engine (T-Engine) that performs all the core transforms.

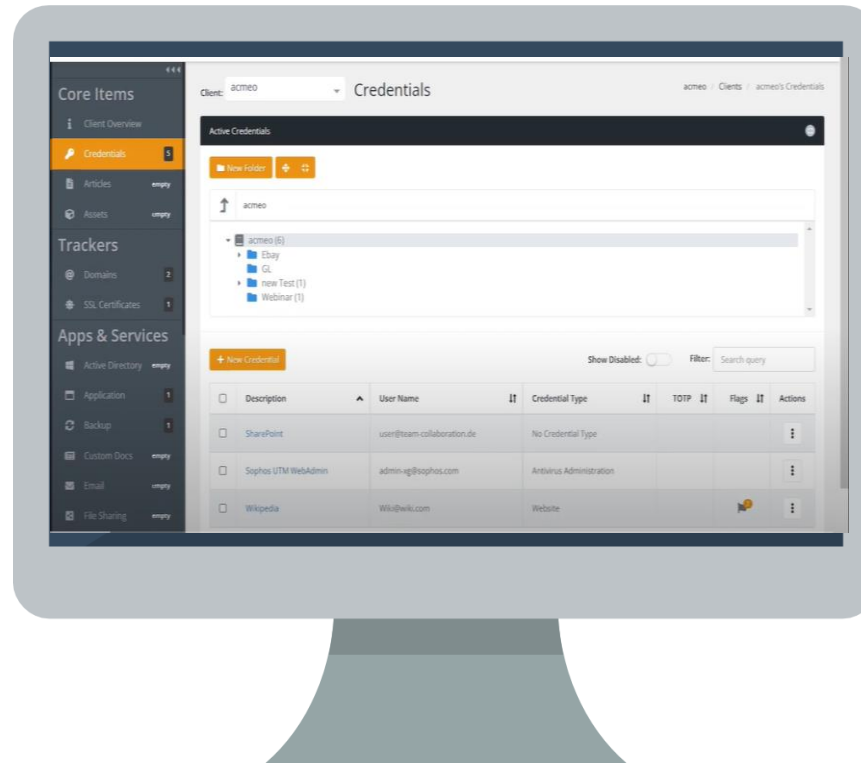

Transform Service
Omni-Contenta
Transform Service provides a secure, scalable, reliable, and extensible mechanism for converting files from their current format into other formats.

Media Management

Omni-Contenta Media Management provides the capability to transform and add metadata and relationships to your digital media.

Document Transformation Engine
Omni-Contenta Document Transformation Engine is a stable, fast, and scalable solution for high-quality transformations of Microsoft Office documents.

Features

Search

Gain insight into content, metadata, and governance with developer and user-friendly contextual analytics, without the need for specialized business intelligence (BI) teams. Multi-server index clustering (including Solr sharding) provides maximum search performance.

Search and Insight Engine
Omni-Contenta Search and Insight Engine is our new generation of analytics using Omni-Contenta Search Services.

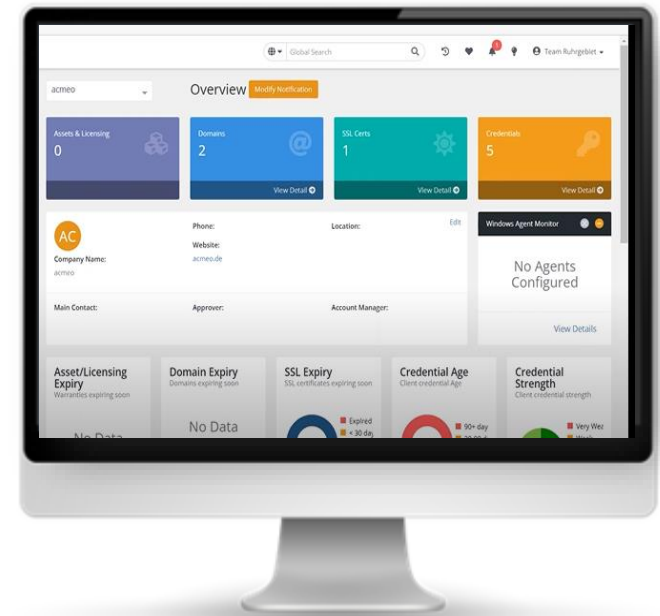

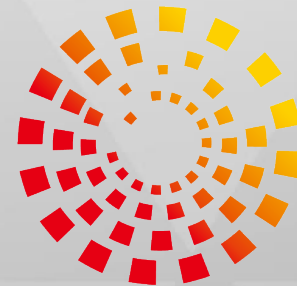

Search Enterprise

Omni-Contenta Search Enterprise enables enterprise customers to use Elasticsearch with Omni-Contenta Content Services.

Search and Insight Engine
Omni-Contenta Search and Insight Engine is our new generation of analytics using Omni-Contenta Search Services.
