# VRTS VIRTUAL REALITY SOFTWARE

As your company grows, you will find that training costs for your workers will increase. Not only costs, the risk of accidents during training is also increasing, especially if your company is engaged in manufacturing, construction, and the like.

With VRTS (Virtual Reality Trainer System) Content Software technology you will be able to provide the best training for your workers, with scalability that is much more cost-friendly due to its digital nature, and also risk-free because all activities in it are simulated virtually.

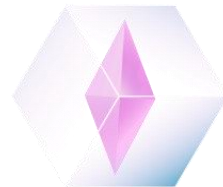

- Using VR Goggles, interact with VRTS content.
- Modeling heavy equipment components using VR
- Shows the location of heavy equipment components using VR.
- Shows the flow and steps of equipment troubleshooting.
- Provides information on heavy equipment components.
- features a realistic 3-D view of heavy equipment components.
- run-time 3D display of heavy equipment.
