

Omni-Streamix

Streaming  
Server   
System

## Overview

Streaming Server System will be utilized to send video or audio content in compressed form over the Internet and played immediately, rather than being saved to the hard drive. With streaming media, a user does not have to wait to download a file to play it. Because the media is sent in a continuous stream of data it can play as it arrives

Stream Video stored from the database (e.g Youtube)

Streaming simultaneously by many users (Multicast)

Accommodate major video streaming protocols such as UDP and MMS

**Easily broadcast from your browser**
