# TELEGRAM/ RADIOGRAM MESSAGING SYSTEM

# OVERVIEW

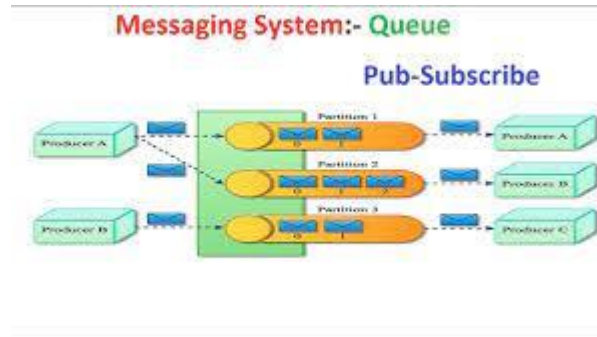

There is a function in this application designed to simulate information originating from intelligence as well as instructions from supervision and control for specific tasks and issues. There is a possibility of sending telegrams to one or many users in real-time or on a schedule based on the time at which the scenario was created.

## FEATURES / FUNCTION

In addition to being a web-based application, this application also has a number of useful features, such as:

- There is the possibility of using this tool to send scheduled information delivery shipments: it can be pre-set so that the input can be done before the training begins.
- Using military Telegram format
- It can do file management by uploading documents
