Omni-Workflow Manager Omni Global Technologies
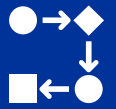

Workflow Management System

Workflow Management Module

OVERVIEW

A workflow management system (WfMS or WFMS) provides an infrastructure for the set-up, performance and monitoring of a defined sequence of tasks, arranged as a workflow application.

Workflow Management Module

Management of the flow of documents and activities in the military research center environment online.
Benefit :
- Facilitate the management of incoming and outgoing documents electronically.
- Improve the efficiency and effectiveness of document management.
- Speed up management flow management Electronically

User Management Module

- Management of users who have access to the Workflow Management System.
- Setting user rights/privileges to the Workflow Management System.

User Interaction Module

- Setting the pattern of interaction between users of the Workflow Management System.
- Have notifications when there are new messages.

Workflow Management Module

Workflow Management (BPM)

- Design/model processes with Process Builder (fully web-based)
- Drag-and-drop interface
- No client-installation required
- Execute processes with human tasks and system tools
- Monitor running and completed processes
- Integrate with external systems using plugins

Data Lists

- Build tabular data lists which support sorting, paging and filtering with Datalist Builder
- Drag-and-drop interface
- No client-installation required (fully web-based)
- Support for configurable data binders to load data from various sources
- Extend data binders (sources) using plugins

Form

- Build web-based forms with Form Builder
- Drag-and-drop interface
- No client-installation required (fully web-based)
- Flexible form layout and configuration
- Wizard-style property dialogs
- Extend form element types using plugins
- Support for multiple configurable data binders in a single form to load and store data
- Extend data binders (sources) using plugins
- Mobile browser support

User Management Module

Manage users, groups and organizational charts (organizations, departments and reporting structure).

Integration to external directory systems can be achieved through plugins.

User Interaction Module

Enterprise UI Future

Dashboard capabilities

Calendar view

Additional end-user interface (userview) themes

User views

Build front-end end-user UI for apps with Userview Builder

Drag-and-drop interface

No client-installation required (fully web-based)

Combine forms and datalists in a userview to support CRUD (create,read,update,delete) operations for data management

Support for configurable userview design themes

Extend userview functionality using menu type plugins
