

Critical Energy Support System

# The E&P Dashboard

The E&P dashboards bring interactive visual analysis to relevant content for key user workflows including activity tracking, opportunity assessment, basin screening and reservoir analogue studies. This dashboard allow users to easily track :

- Planned & active exploration activity, high impact wells & prospects.
- Opportunity Monitor – allows users to assess available exploration opportunities whether Farm-In, Bid-Round or Open Acreage.
- Country Monitor – allows users to visualize a synoptic view of country E&P activity trends.

Exploration Monitor dashboard allows a user to track planned & active exploration activity, High Impact Well drilling and success/failure, Exploration drilling, Exploration activity & performance, Rig utilization & Prospects.

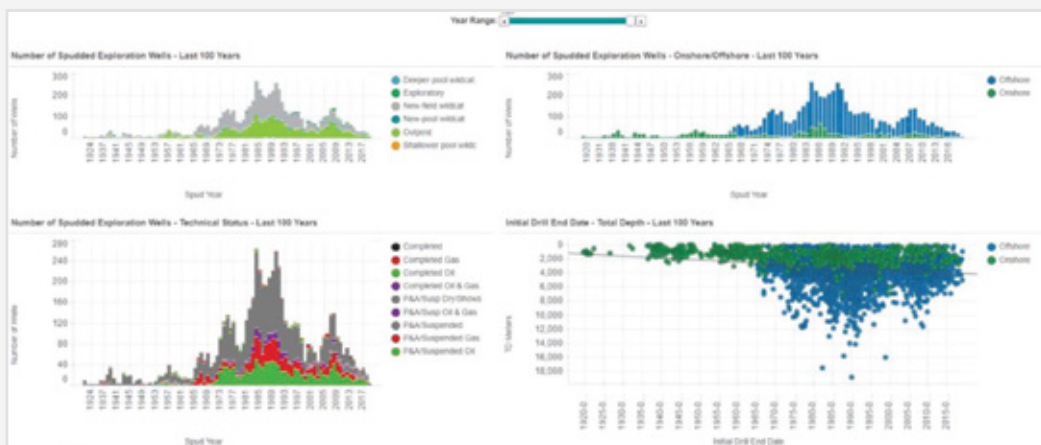

The Opportunity Monitor allows users to quickly assess available exploration opportunities, whether they be by Bid Round, Farm-In or Open Area. Opportunity monitor have several perspective view from license round and open areas, farm in opportunities until contract awards.

The Country Monitor dashboard is a one-stop shop for an overview of Country exploration and activity trends over time. The Country Snapshot page allows the user to set the relative time period of interest.

By default the charts are showing the last 20 years of activity. Exploration drilling, seismic surveys and contract award/expiry are shown along with the Current Top 20 Operators.

Country monitor provide capability for user to track : drilling trends, drilling success rates, reserved & production, production, prospect & impact wells, field discoveries map, and field lifecycle. for example, the Drilling Trends page shows drilling activity over the set time period, with the ability to compare well class, well status and onshore/offshore split on the same page, along with the well depth
